DOE/EIA-0218(91-49)

Weekly Coal Production

Production for Week Ended: November 30, 1991

Preface

The Weekly Coal Production (WCP) report provides weekly estimates of U.S. coal production by State. Supplementary data are usually published monthly in two supplements: the Coal Exports and Imports Supplement and the Domestic Market Supplement. The Coal Exports and Imports Supplement contains detailed monthly data on U.S. coal and coke exports and imports. This week's Domestic Market Supplement contains detailed monthly electric utility coal statistics, by Census Division and State, for generation, consumption, stocks, receipts, sulfur content, prices, and the origin and destination of coal shipments. This supplement also contains summary-level, monthly data for all coal-consuming sectors on a quarterly basis.

Preliminary coal production data are published quarterly, based on production data collected using Form EIA-6, "Coal Distribution Report." Based on 1988 through 1990 data, the coal production estimation error for a quarter at the national level (i.e., the difference between the sum of the weekly estimates for a quarter and the quarterly EIA-6 preliminary data) ranges from 1 percent to 4 percent for 1988, 1 percent to 2 percent for 1989, and 0.3 percent to 3 percent for 1990.

Final coal production data are published annually, based on the EIA-7A coal production survey. Based on 1988 through 1990 data, the revision error for a

quarter at the national level (i.e., the difference between the EIA-6 preliminary data and the EIA-7A final data) ranges from 0.02 percent to 0.08 percent for 1988, 0.09 percent to 0.14 percent for 1989, and 0.01 percent to 0.05 percent for 1990. Usually the EIA-7A coal production data are higher than the EIA-6 coal production data, due to differences in the threshold reporting requirements.

This publication is prepared by the Survey Management Division, Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. Weekly Coal Production is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly Coal Distribution, the Quarterly Coal Report, Coal Production 1990, and Coal Data: A Reference.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull, Team Leader, Coal Data Systems, and Noel C. Balthasar, Chief, Coal and Uranium Data Systems Branch. Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202/586-8800).

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the Department of Energy. The information contained herein should not be construed as advocating or reflecting any policy of the Department of Energy or any other organization.

Summary

U.S. coal production in the week ended November 30, 1991, as estimated by the Energy Information Administration, totaled 16 million short tons. This was 26 percent less than in the previous week, and 24 percent lower than in the comparable week in 1990, reflecting the Thanksgiving Day holiday. Production east of the Mississippi River totaled 8 million short tons, and production west of the Mississippi River totaled 7 million short tons.

Coal consumption at electric utility plants in September 1991 totaled 65 million short tons, 2 million short tons lower than the level in September 1990. Total coal consumption at electric utility plants for the first 9 months of 1991 was 580 million short tons, 2 million short tons more than in the comparable period in 1990. The largest regional changes occurred in West South Central Census Division, where consumption rose 4 million short tons, and the Mountain Census Division, where consumption dropped 3 million short tons.

In the West South Central Census Division, electric utility coal consumption was up because of an increase in coal-fired electricity generation in that region. In the Mountain Census Division, electric utility coal consumption was down, primarily because of the lower demand for electricity in New Mexico.

Electric utility coal stocks on September 30, 1991, were 154 million short tons, 5 million short tons more than a year earlier. Electric utilities built up coal stocks by 1 million short tons during September 1991.

Coal receipts at electric utility plants in August 1991 were 70 million short tons, I million short tons less than in August 1990. Total coal receipts at electric utilities for the first 8 months of 1991 totaled 507 million short tons, 16 million short tons less than in the comparable period in 1990, when electric utilities built up coal stocks by 14 million short tons.

^{*} For quantity data, the absolute value of the number is less than 0.5 glgawatthours. For percentage calculations, the absolute value of the number is

less than 0.05 percent.

Notes: Negative generation denotes that electric power consumed for plant use exceeds gross generation. Total may not equal sum of components because of independent rounding.

Source: Energy Information Administration, Form EIA-759, "Monthly Power Plant Report."

Table 8. Coal Consumption at Electric Utility Plants, September 1991 (Thousand Short Tons)

| S. Total | | | |

^{*} For quantity data, the value of the number is less than 0.5 thousand short tons. For percentage calculations, the absolute value of the number is less than 0.05 percent.

Note: Total may not equal sum of components because of independent rounding.
